Remix | RMX-MM-2018-1009 Rev 0

Meeting Minutes, October 2018

Contents

1. CHANGELOG

1. **Rev 0**: Initial document release

Remix | RMX-MM-2018-1009 Rev 0

2. MEETING MINUTES

Minutes from the October 2018 developer meeting

2.1   EXCHANGES

Discussion revolved around the communities noted desire for Remix to be listed on an exchange and our team reevaluating the urgency in applying to crypto-currency exchange(s). The team came to agreement that submitting applications to exchanges is required for further growth and should be a higher priority item.

- Provides incentive to mine
- Increases network growth

2.1.1   EXCHANGE STATUS

- Currently none listing RMX
- Information submitted formally to TradeOgre to request listing
- Binance requirements and documentation for listing are being reviewed internally
- Need to research additional exchanges and costs to list on each
- Potential to open FFS (when ready) for support in getting on exchanges
    - IE assist in covering listing fees

2.2   INITIATIVES

Initiatives underway and those requiring feasibility review or specification development

2.2.1   ACTIVE INITIATIVES

- Remix Core: Team must continuously review upstream and parallel projects for issues and concerns to mitigate bugs and security threats. Community has been instrumental in assisting with critical bugs on a timely basis.
- Remix Desktop GUI Wallet: Wallet source code now available using Remix core as a submodule. No major enhancements planned until additional features are available in Remix core, necessitating an update. Encourage the use of opening issues on GitHub for tracking items
- Remix Web Wallet: Alpha Remix web wallet is live. Not recommended for anything other than testing at this point.
- Remix Forum Funding System: Alpha Remix Forum Funding System (FFS) being developed internally and with community support.

2.2.2   FUTURE INITIATIVES

- Remix Mobile Wallet: Feasibility review complete and project to commence. Requires specification development
- Research Topics of Interest:
    - Difficulty algorithms
    - NetHash Abatement
